

THE COPRISYSTEMS COVERING TECHNOLOGY

CopriSystems' technical expertise, design flexibility, manufacturing excellence and responsive service have made it a leader in supply and installation of covering solutions for the sports, industrial, retail, agricultural, defence and humanitarian sectors with all products bespoke for the site and requirement, conforming to wind and snow loadings in accordance with BS 6399.

Structures are manufactured using galvanised steel, aluminium or Glulam wood. Frames are covered with a 900g/m² PVC coated polyester fabric, fire tested to BS 7157 & BS 7837. However, CopriSystems can cover their structures with single skin or insulated steel cladding, glass, polycarbonate, wood and toughened plastic cladding.

The company's design enables installation to be kept to a minimum, allowing use of the structure in the shortest time possible. The lightweight concept allows for small foundations and in some cases, none, if there's existing concrete to a suitable standard.

Sustainability is an increasing area of business that CopriSystems always looks to improve in their systems. With the benefit of Glulam wood structures, the environmental impact is greatly reduced whilst remaining sustainable with new trees planted in place of the old.

In any industrial environment, having robust and practical buildings to protect against the elements and security threats is a must. We offer turnkey projects for the logistics, manufacturing and storage sectors with canopies, tunnels, portal frames and domes to be freestanding or mounted to existing structures for use as permanent or temporary.

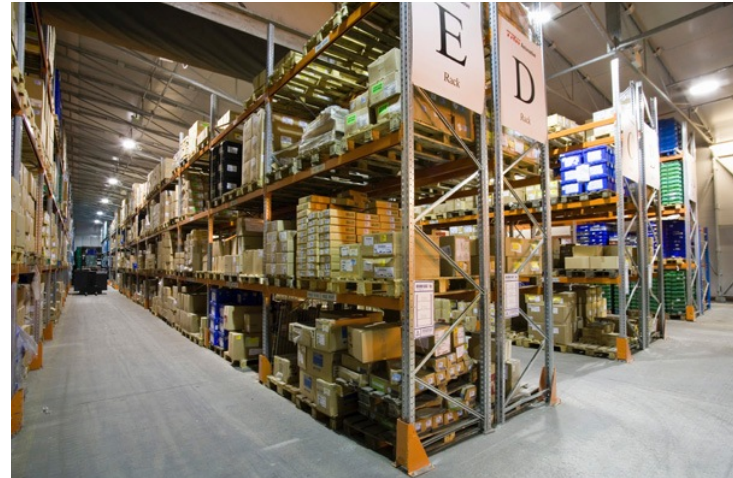

INDESIT HOTPOINT

Width 21m x length 31m
x internal height 5.5m

TRW AUTOMOTIVE

Width 18m x length 70m x internal height 5m

JTEKT AUTOMOTIVE

Width 24m x
length 26.64m

70m x height 6.8m

**GLULAM SALT
STORE**
Width 18m x
length 25m x
internal height 9m

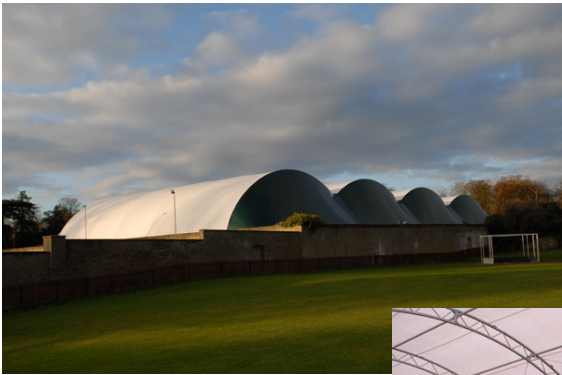

CopriSystems offers a full turnkey project as principal contractor. This incorporates design and specification with customers input throughout to gain their preferred outcome to suit the budget. The structures are tailor made for the sport and environment with Glulam wood a popular frame material for its warmth, allowing the internal area to be used for other activities. CopriSystems' unique full length sliding side curtains allow natural ventilation and gives an outdoor feeling.
